Installing brew on MacOS

2022-05-26

Phillip G. Bradford¹

SUMMARY

This document shows how to install Homebrew (MacOS: brew) MacOS.

DETAILS

Homebrew is an open-source package manager. It does thorough updating of your system while it installs packages. It is independent of Apple MacOS and supported by its own contributors and governance board.

INSTALLATION

Go to: <https://brew.sh/>

As stated on this website, in a Terminal on MacOS, run the following command:

```
/bin/bash -c "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/HEAD/install.sh)"
```

This is at your own risk.
